# BENEFITS FOR BUSINESSES

---

## Shortening information distance

Enables a smooth flow of information across the organization through structured workflows, immediately transfers information to final destinations without intermediaries.

Managers, Executives, Accountants... can get not only accurate but multi-dimension information by a mouse "click". No distance, instantly.

## Comprehensive management

Establishes an integrated information system that enables end-to-end management of core business and production processes through ERP solutions on an IT platform.

Ensures timely, consistent, and comprehensive updates, providing managers not only with an overall view but also detailed analyses to effectively support administration and decision-making.

## Processing complex requirements

Manages the production process and calculates product costs for items with complex BOMs and multiple production steps.

Manages the purchasing process from requisition and approval, through quotation collection, supplier selection, order approval, goods receipt, payment, and returns to suppliers.

Controls sales policies, including pricing, discounts, promotions, debt management,

## Saving resources

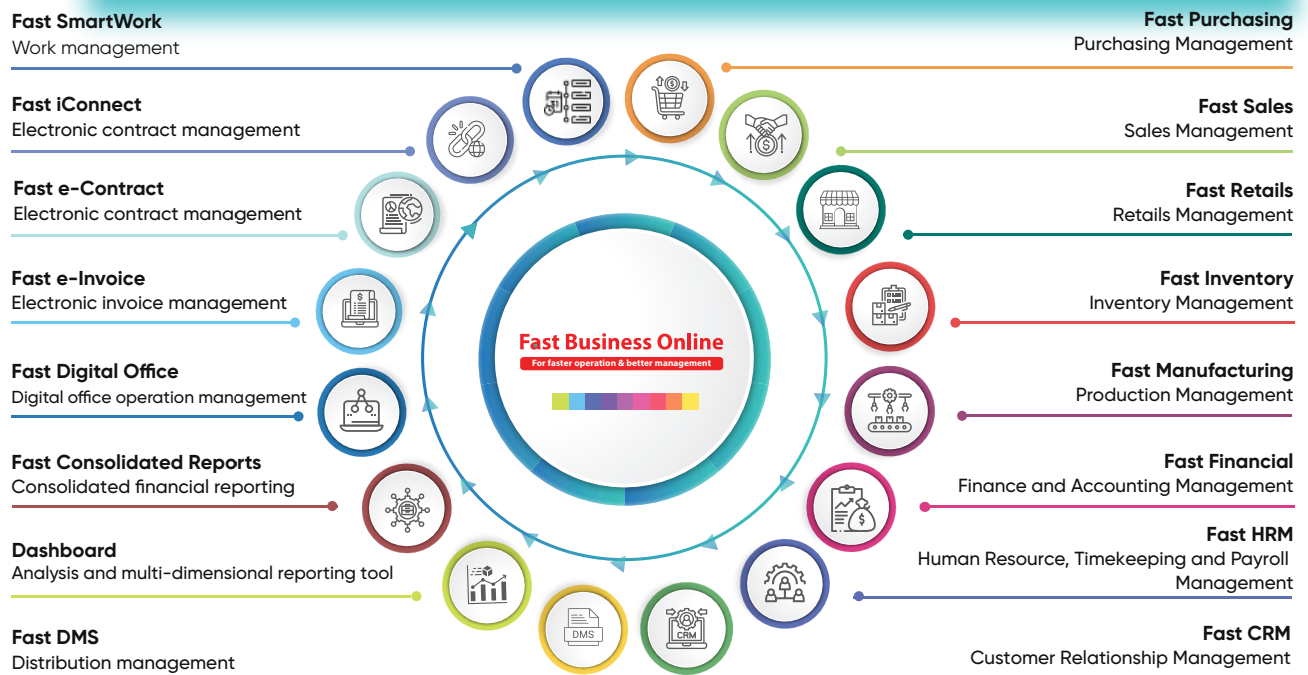

Provides accurate and timely information, enabling prompt decision-making and mitigating risks caused by delayed or incorrect data.

Controls business processes effectively, minimizing losses and waste, thereby reducing product costs and unexpected expenses.

Reduces future reinvestment needs by delivering software capable of meeting emerging requirements with a one-time investment.

## 5 REASONS WHY TO CHOOSE

- 1 Strong Brand**  
 30 years of extensive experience in developing, consulting, and implementing enterprise management solutions on IT platforms.  
 68,000+ customers nationwide and recipient of numerous prestigious awards.
- 2 Highly Qualified Personnel**  
 550+ employees working in Hanoi, Da Nang, and HCMC, with high professional qualifications, comprehensively trained in specialized operations and soft skills.
- 3 Solving Large, Industry-Specific Challenges**  
 Developing specialized ERP systems that fully address operational requirements and tackle complex problems for medium and large enterprises across various industries and sectors.
- 4 API Connectivity for a Comprehensive Digital Management Ecosystem**  
 Offers high flexibility, enabling seamless integration with other devices, systems, and applications through APIs.
- 5 Modern Technology**  
 Leveraging cloud technology, allowing businesses to flexibly deploy on-premise or utilize cloud services.  
 Applying artificial intelligence (AI) to enable users to access and analyze data easily, intuitively, and rapidly.

### The main modules of Fast Business Online

## SOLUTION OVERVIEW

**Fast AI Driven Business Online** is an upgraded version of Fast Business Online, integrated with artificial intelligence (AI) technology to help businesses automate operational processes and enhance management and decision-making efficiency.

### Fast Business Online supports enterprise management

**According to the plan:** Budget for expenses or investments; delivery schedules; goods receipt plans; overall production plans and production plans by production orders or sales orders; material requirement plans based on standards; accounts receivable collection plans and accounts payable payment plans; loan repayment plans.

**According to the process:** Core business processes such as purchasing, sales, and production are fully managed within Fast Business Online. The system allows defining the status of each step in the process and specifying corresponding actions for each status.

#### Financial analysis report system:

Analyzes financial ratios, financial structure, compares actual ratios and structure against planned figures, and benchmarks against industry standards.

#### Multi-period and multi-unit management report system:

Allows to conduct reporting periods of years or consecutive periods easily. Allows to conduct detailed or summary reports by each specific business unit, branch, store, unit group or the whole Corporation/Group.

### Mobile App Version

Manage operations and view reports directly on mobile phones and tablets:

- View reports.
- Create documents and request forms.
- Approve requests.

# Fast Business Online is flexible and customizable

## Customizable to management needs

Fast Business provides utilities to fine tuning parameters for management requirements from adding/removing information fields need to manage, reporting situations and actions of each specific step to editing data screens, creating/deleting reports, menu system...

## Read data and connect with devices

Import data from Excel, TXT, DBF, Access, SQL, etc.

Read data directly from barcode scanners, time attendance devices, and weighing machines...

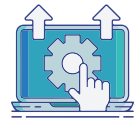

## Export data

Export data to formatted files such as Excel, Word, HTML, PDF...

Create emails with content and attachments ready to send.

## Ability to select and upgrade modules on demand

Customers can initially choose the necessary modules and later implement additional modules as the business grows and expands.

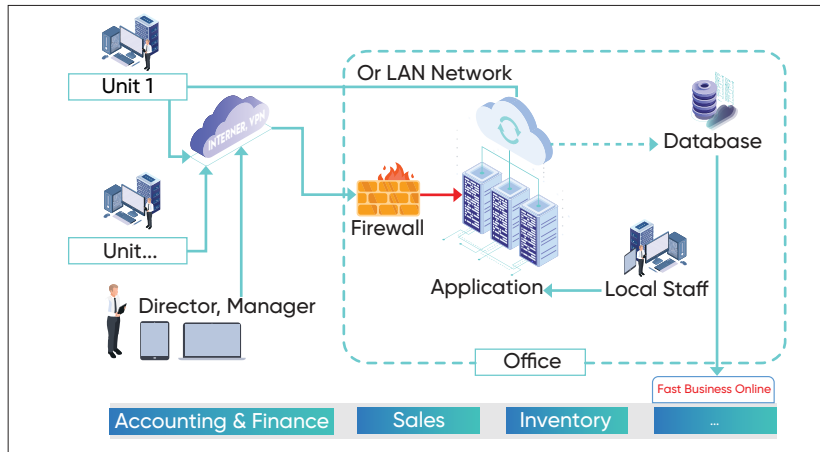

## Customize for requirements

Customize the software to align with the specific characteristics of the business.

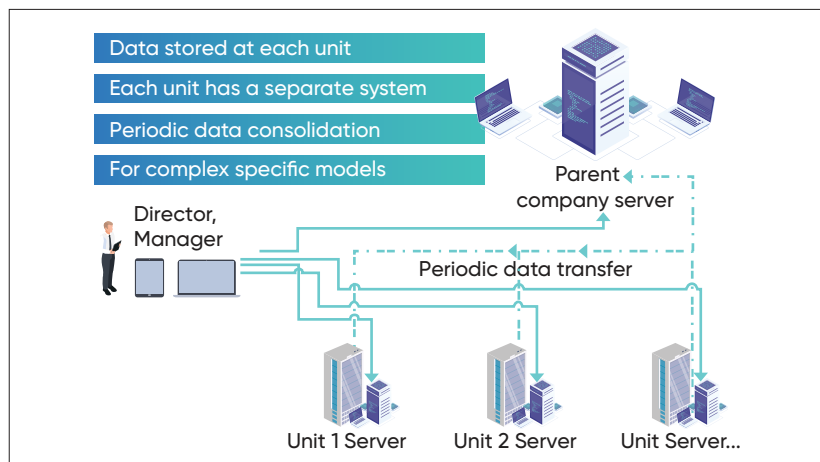

# SOLUTION OVERVIEW

## Multi-unit/company data management

Centralized model: Database is centralized at head offices

Decentralized model: Periodically synchronize data between subsidiaries and the parent company.

## System Security

- Secure access with password protection and Two-Factor Authentication (2FA).
- Assign permissions to individual users or user groups.
- Restrict access down to menus, windows, fields, and processing actions.
- Configure data fields as hidden, read-only, or read/write.
- Define permissions for each transaction: view, create, edit, delete, print, approve.
- Control user permissions for master data: view, add, edit, delete.
- Control user permissions for detailed data by business unit code.

## Master/list file management

- Allows users to arrange, adjust input information, display and lookup information. Allows users to look up master files in different ways while inputting data.
- Access authorization to items by data unit/company.
- Control item status: Active/Inactive.
- Tool for code changing or merging in all incurred data.

- User-defined fields available for additional specific management requirements.
- Data in master files can be easily filtered/grouped in different ways to support in data analyzing.
- Allows to drag and drop while grouping.
- Output Excel files by a shortcut.

## Transaction and voucher processing

- Display transaction process on screen.
- Manage status of each transaction, voucher.
- Multi-level approving according voucher status and position of approval person.
- Allow to approve sequential or parallel for each vouchers.
- Establish/define process/data flow of vouchers and transactions.
- Define new, add/remove different transaction codes according to specific requirements.
- Define numbering voucher method; allows/not allows duplicate number of vouchers .
- Automatically real-time/instant update account balances, item inventory...
- Check instant inventory; credit limit... to allow/hold transactions.
- Many utilities to look up data during data entry.
- Import data from Excel files.
- Copy and paste data directly between Excel and program.
- Re-arrange line order in vouchers.
- Keep track of transactions: Created/Modified/Deleted time, Created/ Modified/ Deleted by.

## Languages of interface and reports

## Multi-period data report

- Reports comparing multi-period or the same period of different years.
- Provides utilities to view/print reports.
- Show data report in chart form.
- Quick report in user-defined format.
- Reports exported to Microsoft Excel, Word, text, or XML.

- Allow users to edit filter conditions or define formula in some reports.
- Drill-down feature allows users to read detailed data or view original voucher while viewing summary report. Modification of original voucher is possible for authorized users.
- Quick report customization allows users to print reports with preferred field information and column widths.

## Data analysis and report tool Dashboard

Create reports from simple to complex and specialized ones.

Fast processing speed, instantly after changing the way.

High-quality, easy-to-understand chart system.

Optimize the decision-making process.

## Other features

**Notify Feature:** Allow to inform jobs to related persons (can be voucher, proposals which need to be approved, to do tasks and other internal notices...)

**Calendar Feature:** Allow to update/share jobs/events, receive job assignments from high-level ones and assign to low-level ones, track/supervise the implementation of the working **plan**.

**Post Feature:** Allow users to share public information /documents, then discuss and feedback directly on the program.

**Features of regular report mailing:** Allow to define reports which need to be sent by email by weekly/-daily/monthly basis to the authorized users

**Chat Feature:** Allows users to communicate and chat to increase interaction when using of the program, as well as in daily tasks.

## Multi-currency and dual-base currency management

- Base currency options: VND or any foreign currency.
- Input transactions and prepare reports in transaction currencies.
- Options for book rate method: Monthly average/Average, NTXT, Specific.
- Select input data mode of exchanging to base currency or two-base currency (to exchange and present 2 base currencies while inputting data).

## Technology and Work Environment

### Web-based

- Operating system: Windows, macOS, Linux...
- Browsers: MS Edge, Chrome, Firefox, Opera...
- Reporting tool: Crystal Report.
- Security: According to SSL security requirements..

### Mobile app

- Operating system: Android, iOS.
- Reporting tool: Crystal Report, Excel.
- Security: According to RSA/AES security requirements.

Database: SQL Server.  
Programming languages: ASP.NET,  
HTML/JS/CSS.

Software structure: 3-tier.  
Network: Remote access.
